DESCRIPTION

- **3-pcs cryo ball valve with temperature span from -196°C to +150°C.** Suitable for nitrogen, CO₂, oxygen, etc. All valves are degreased for oxygen.
- **Long neck prevents freezing of the stem packing** as this is located at the top of the stem extension. This minimizes the risk of leakage.
- **All balls are drilled with a relief hole** to prevent thermal expansion.
- **Material certifikat EN10204/3.1** is available.
