DESCRIPTION

- **Solid industrial ball valve** in acid-proof, stainless steel CF8M and steel WCB. The 3-pcs. design with "build-in flanges" makes it easy to remove the valves middle part for maintenance.
- **Maintenance free stuffing box** with spring washers, PTFE V-rings and FPM O-ring provides optimum sealing and longer service life. The stuffing box will self-adjust under changing temperatures and due to wear.
- **The Blow-out proof stem**, has apart from a security function also the benefit of increasing the stem sealing when pressure rises.
- **Electric equalizer connections**, between ball, stem and body makes it possible to install this valve type in ATEX area (Group II, equipment category 2).
- **Traceability on all ball valves**, and delivery of material certificate EN 10204/3.1 on request.
- **ISO 5211 top flange** makes it simple and easy to mount an actuator without bracket and coupling. A compact solution with less connections = less slack.
- **Stainless steel weld ends ISO 1127**, and steel weld ends Sch. 40 are standard. Furthermore thread ends in BSPP.
